Questions?

3. A list of all suspect materials identified in affected areas.
4. A statement of the asbestos samples collected from affected areas.
5. A list of potential locations of asbestos and asbestos materials that were not accessible during initial inspection.

When a structure or facility is to be demolished or renovated, an inspection, conducted by a certified individual and an inspection report containing the following information: An asbestos survey report must be generated, and available to all persons who have access to the work site. Furthermore, the asbestos survey report must be maintained by the operator of the work site, and become part of the facility's records.

Report contains the following information:

1. A brief description of area.
2. A list of all suspect asbestos materials collected from affected areas.
3. A list of potential locations of asbestos and asbestos materials that were not accessible during initial inspection.
4. A statement of the asbestos samples collected from affected areas.
5. A list of potential locations of asbestos and asbestos materials that were not accessible during initial inspection.
